Features:

- Nesting work for Automatic Infeed Loading with scissor lift and Outfeed Unloading with conveyor Process
- Automatic 8 Rotary station auto tool changer for increased productivity.
- All “servo motor” driving system: All axis are driven by brush-less type, high torque AC servo motors.
- PC base Syntec CNC controller is setup to accept standard G-code programming formats along with on board conversational applications.
- Optional CAD/CAM system can create and edit part programs then send to machine for easy cutting. DXF files can be imported, modified and edited from here to create a G-code.
- Moving gantry construction for space saving.
- The rigid steel frame construction has been stress relieved prior to finish machining to provide repeat-ability and accuracy.
- The HSD spindle uses CP4 DB bearings with a dust-free design. The heavy-duty fan cooling system forces air through the spindle to assist in trouble-free operation.
- Automatic frequency brake for the spindle allows rapid deceleration resulting in faster tool changes.
- Linear guides and sliding blocks are prismatic pre-loaded with recirculation bearings to ensure maximum rapid traverse and precision.
- The X & Y axis are equipped with a precision rack & pinion driving system.
- The Z axis utilizes a ball screw assembly complete with the pre-loaded and ground screw for long life and optimum accuracy.
- Special design 6 zone vacuum table surface for powerful hold down.
